HSJ1056K3 143981 bp DNA linear PRI 04-APR-2001 Human DNA sequence from clone RPS-1050K3 on chromosome 20. Contains part of the EYA2 gene for eyes absent (Drosophila) homolog 2, a Glyceraldehyde 3-phosphate dehydrogenase (GAPDH) pseudogene, an RPL27A (665 ribosomal protein L27A) pseudogene, ESTS, STSs and

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description

http://www.sanger.com.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 20, constructed by the Sanger Centre Chromosome 20 http://www.sanger.ac.uk/HGP/Chr20
This sequence is the entire insert of clone RP5-1050K3 The true right end of clone RP11.32151 is at 58476 in this sequence. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. RP5-1050K3 is from the library RPCI-5 constructed by the group of Pieter de Jong. For
                                                                                   corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "LIMC4 repeat: matches 7626. .7750 of consensus"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a 'working draft' sequence. It currently consists of 46 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a "vorking draft' sequence. It currently
* consists of 11 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.

LITECT. SUBMILISATION

Submitted (17-OCT-2001) Takuji Sasaki, National Institute of Agrobiological Sciences, Rice Genome Research Program; Kannondai 2-1-2, Tsukuba, Ibaraki 305-8602, Japan (E-mail:tsasakifenias affrc.go.jp, URL:http://rgp.dna.affrc.go.jp/, Tel:g1-298-38-7441, Fax:81-298-38-7468)

The nucleotide sequence of this BAC clone was generated by combining Monsanto and RGP-Japan sequencing data.

NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          HTG5, HTG5_PHASE2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The YAC segment Y47G6A was sequenced to span the gap between K03E5 and T28F2. The clone sequenced to the left is K03E5, 200 bp overlap; the clone sequenced to the right is T28F2, 200 bp overlap. Actual start of this YAC is at base position 28973 of CELY44E3A; actual end is at 20751 of CELY28F2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTICE: This sequence may not be the entire insert of this clone. It may be shorter because we only sequence overlapping sections once, or longer because we provide a small overlap between neighboring submissions.

* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
                                                                                                                         Length 319857;
                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Web site: http://www-seq.wi.mit.edu

Direct Submission

Submitted (23-FEB-1999) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St. Loui Mn 63108, USA

Mn 63108, USA

On Mar 1, 1999 this sequence version replaced gi:4263156.

* NOTE: This is a "working draft" sequence. It currently consists of 4 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as "runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence as soon as it is available and the accession number will

* be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Web site: http://www-seq.wi.mit.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               * NOTE: This record contains 105 individual

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low-pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              847 946: gap of 100 bp

This oligonucleotide represents one of a claimed primer pair (see also AAX87658) that can be used in the amplification of microtubule motor protein nucleic acids, especially TL-gamma DNA or RNA from a motor protein nucleic acids, especially TL-gamma DNA or RNA from a TL-gamma (see AAX0656).

TL-gamma (see AAX06618) is a novel ATP-dependent, plus end-directed microtubule motor protein that is a member of the unc-104 family microtubule motor protein that is a member of the unc-104 family cand kinesin superfamily. The invention provides TL-gamma nucleic acids, proteins and antibodies, and methods of screening for TL-gamma nucleic acids are also used to infections and diseases caused by mutated TL-gamma, or neurodegeneration. TL-gamma nucleic acids are also used to identify polymorphic variants, alleles, homologues etc. of TL-gamma, or coher motor proteins, to generate protein structural models, for recombinant production of TL-gamma, as antisense molecules, to petection of TL-gamma, as antisense molecules, to betection of TL-gamma, as antisense molecules, to betection of TL-gamma allows differentiation between hyphal and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TL-gamma; kinesin; motor protein; microtubule; unc-104; infection; neurodegenerative disease; Alzheimer's disease; Parkinson's disease; Huntington's disease; amyotrophic lateral sclerosis; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Liu C, Asundi V, Xu C, Wehrman T, Ren F, Ma Y, Zhou
Yang Y, Drmanac RT, Zhang J, Chen R, Xue AJ, Wang J;
                                                                                                                                                                                      polymorphic variants, alleles, homologues etc. of TL-gamma, or
other motor proteins, to generate protein structural models, for
recombinant production of TL-gamma, as antisense molecules, to
produce transgenic or knockout animals, and in gene therapy.
Detection of TL-gamma allows differentiation between hyphal and
                                                                                                                                                                                                                                                                                                                                                                                                ö
                                  The gene was isolated
coding for TL-gamma (see AAY06618), a novel ATP-dependent, plue deficiented microtubule motor protein that is a member of the unc-1104 family and kinesin superfamily. The gene was isolated from genomic DNA by PCR amplification (see also AAX87659-61). The invention provides TL-gamma nucleic acids, proteins and antibodies, and methods of screening for TL-gamma modulators potentially useful for treating hyphal fungal infections and diseases caused by mutated TL-gamma, e.g. neurodegeneration involving anterograde axonal transport, such as Alzheimer's, parklisson's or Huntington's diseases or amyotrophic lateral clerosis. TL-gamma nucleic acids are also used to identify
                                                                                                                                                                                                                                                                                                                                                             Length 2352;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CDNA encoding novel human secretory protein, Seq ID No 6.

The invention relates to novel isolated human secreted polypeptides (I) and (II) are useful for traating and polynuclectides (II). (I) and (II) are useful for traating to proper the control of the polypeptide as well as for studying medulators of the polypeptide of the proliferation of neural cells and respectation of nerve control of the proliferation of neural cells and respectation of nerve and brain tissue and is useful for the treatment of central and paralitism of the proliferation of neural cells and respectation of nerve and brain tissue and is useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's, control of stages, in addition, (I) is involved in chemoteric or central and peripheral nervous system diseases, and amyotrophic lateral control of haematopolesis and is useful for treating mysloid or light disorders, platelet disorders such as thrombocytopenia or lymphoid cell disorders, platelet disorders such as thrombocytopenia or injunct of bone, cartilage tendon, lighment and/or nerve tissue growth, and in tissue repair, healing of burns, incisions, curver, and in tissue repair, healing of burns, incisions, curver, and in tissue repair, healing of burns, incisions, curver, and in tissue repair, healing of burns, incisions, curver, and in discusor eagence. Furthermore, (I) is also useful for teperfusion injury in various tissues, various immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple solerosis, contention and treatment of lung or live fibronia, and in dispets mellitus, myssthemia gravis, allerian carbolism, catabolism, catabolism, catabolism, catabolism, catabolism, catabolism, catabolism, can
Novel polypeptides and nucleic acids obtained from cDNA libraries prepared from various human tissues, for diagnosis and treatment of cancer, neurological, inflammatory, and autoimmune disorders -

```
AAA AAA43426 to MAA45925 represent specifically claimed secreted expressed sequence tags (SESTS), isolated from human, mouse, chicken and rat tassue sources. The SESTS can have a range of activities depending on the tissues they were isolated from the activities include: the tissues they were isolated from. The activities include: chemotactic; proliferative; immunomodulatory; haematopoietic; chemotactic; antibacterial; antifungal; antiviral; antidiabetic; antisathmatic; vulnerary; antilucer; osteopathic; neuroprotective; antisathmatic; vulnerary; antimingerial; orthoroxides to the series of the series and antidepressant. The series can be used for gene therapy and in vaccines. The SESTS are useful as probes for the correspond to the SESTS are useful as probes for the molecules which correspond to the SESTS. Protelins encoded by the SESTS are useful in assays for determining biological activity and raising antibodies. They may be useful for treatment of autoimmune disorders (multiple sclerosis, insulin dependent diabetes), allergic conditions (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, osteoporosis, osteoarthritis, central nervous system disorders (condition disorders (lasemophilia, thrombosis), inflammatory disorders (crown) series of the series of the series of the series of the series (crown) series of the se

AAA00010 to AAA02716 represent polynucleotides isolated from cDNA libraries constructed from human colon cancer cell lines. The present invention also describes a method of detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample derived from a cell suspected of being cancerous, where detection of the differentially expressed gene product is correlated with a cancerous state of the cell from which the test sample was derived. The polynucleotides sequences can be used in a method for detecting differentially expressed genes correlated with a cancerous state of mammalian cell. The polynucleotides can also be used as probes for detecting and mapping related genes. They can be used in diagnosis and prognosis of diseases and disorders (e.g. identification of premits and mapping relating cancerous states, stages of cancer, or responsiveness of cancer to therapy). This is particularly for breast cancer, oestrogen receptor positive breast cancer, oestrogen receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence encodes a TANGO 201 polypeptide. The specification also describes a TANGO 223 polypeptide. These polypeptides are secreted or transmembrane proteins. Human TANGO 201 and 223 nucleic acids, proteins and their modulators are useful for treating proliferative disorders e.g. neoplasms or tumours, pancreatic disorders is a disorders of the afrenal cortex, adrenal medulla, thyroid gland (e.g. thyroiditis), golter, Graves disease, gastric disorders (e.g. gastritis or tumours), placental disorders (e.g. placentitis or spontaneous abortion), pulmonary disorders (e.g. placentitis or spontaneous abortion), placental disorders (e.g. placentitis), edema, Goodpasture's syndrome, disorders of the stelectasis), edema dystrophy), cardiovascular disorders (e.g. muscular dystrophy), cardiovascular disorders (e.g. techemic heart disease and congenital heart disease), disorders of the brash of the constant of the constant disease of the constant disorders of the constant disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             brain (e.g. cerebral edema), cerebrovascular disease and to treat injury or trauma to the brain. They are also useful for treating hepatic disorders (e.g. jaundice, hepatitis, oirrhosis or malignant tumours), renal, testicular, intestinal disorders. TANGO 223 polynucleotides are also useful for treating leukocytic disorders (e.g. leukopenias, leukocytosis and malignant lymphomas) and prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel nucleic acid molecule encoding secreted or transmembrane protein useful for identifying modulators and for diagnosing and treating pancreatic, cardiovascular, liver and pituitary disorders -

Secretory proteins play important roles in the proliferation control, the differentiation induction, the material transport and the biophylaxis of cells. Membrane proteins have important roles as signal receptors, ion channels and transporters. The present sequence is the coding sequence for a human protein which has at least one hydrophobic domain. The protein encoded by the present sequence may be a secretory or a membrane protein. The encoded protein may have cytokine and cell proliferation differentiation activity, immune stimulating or suppressing activity, haematopolesis activity, issue growth activity, haematopolesis activity, issue growth activity, haematopolesis activity, anti-inflammatory activity, haemostatic and thrombolytic activity, anti-inflammatory activity and tumour inhibition activity. The present sequence could therefore be used for treatment of autoimmune disease, Alzheimer's disease, Parkinson's

                                                                        NAMES OF COLOR OF STREET STREE
```

```
Secretory proteins play important roles in the proliferation control, the differentiation induction, the material transport and the biophylaxis of ceals. Membrane proteins have important roles as signal receptors, ion channels and transporters. The present sequence is the coding sequence for a human protein which has at least one hydrophobic domain. The protein encoded by the present sequence may be a secretory or a membrane protein. The encoded protein may have cytokine and cell proliferation/differentiation activity, immune stimulating or suppressing activity, haematopolesis activity, tissue growth activity, and thrombolytic activity, encoded coll the protein and thrombolytic activity, anti-inflammatory activity and tumour inhibition activity. The present sequence could therefore be used for treatment of autoimmune disease, Alzheimer's disease, Parkinson's
                                                                                                      Human; secreted protein; membrane protein; hydrophobic domain; proliferation control; differentiation induction; material transport; blophylaxis; signal receptor; ion channel; transporter; immunostimulant; immunosuppressant; haematopoiesis regulator; chemotactic; chemokinetic; haemostatic; thrombolytic; anti-inflammatory; tumour inhibition; autoimmune disease; Alzheimer's disease; Parkinson's disease; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Proteins comprising hydrophobic regions, such as secretory and membrane proteins, useful in research and diagnostics and having various activities e.g. immunomodulatory, antiinflammatory, chemokinetic,
                                                                   Hydrophobic domain protein cDNA HP03091 isolated from Liver cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1652 BP; 526 A; 323 C; 379 G; 424 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNas. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNas. The primers allow obtaining of the full-length cDNas easily without any specialised methods. AAH03166 to AAH18628 and AAH18633 to AAH18742 represent human cDNA sequences; AAB92446 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of oligonucleotide comprises at least 15 nucleotides and the combination of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification

The specification also describes a TANGO 223 polypeptide. These polypeptides are secreted or transmembrane proteins. Human TANGO 201 and 223 nucleic acids, proteins and their modulators are useful for treating proliferative disorders e.g. neoplasms or tumours, pancreatic disorders (e.g. pancreatitis), disorders of the adrenal cortex, adrenal medulla, thyroid gland (e.g. thyroiditis), goiter, Graves' disease, gastric disorders (e.g. gastritis or tumours), placental disorders (e.g. placentitis or spontaneous abortion), pulmonary disorders (e.g. muscular dystrophy), cardiovascular disorders (e.g. ischemic heart disease and congenital heart disease), disorders of the brain (e.g. cerebral edema), cerebrovascular disease and to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel nucleic acid molecule encoding secreted or transmembrane prouseful for identifying modulators and for diagnosing and treating pancreatic, cardiovascular, liver and pituitary disorders
                                                                                                                                                                                                                            DNA encoding a human TANGO 201 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  "TANGO 201"

of T-lymphocytes, the proliferation of a cytokine from peripheral blood monocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor VIIA. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polynucleotides encoding PRO polypeptides can be used to generate probes, antisense RNA/DNA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bloactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or gene expression in pericyte cells, the release of proteoglycans from cartilage, the proliferation of inner ear utricular supporting cells or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MBSPX; cancer; preclampsia; immune system; neurological; cytostatic; gynecological; antiinflammatory; neuroprotective; inotropic; relaxant; cardiant; dermatological; gene therapy; human; MBSP10; ss.

                                                                                                                                                                                          polynucleotides encoding the MSDFX polypeptides. The MBSPX polypeptide, nucleic acid and an MBSPX antibody are useful for treating or preventing a pathology associated with the protein especially in humans. The MBSPX nucleic acid can be used to express MBSPX protein (e.g. via a recombinant expression vector in a host cell in gene therapy applications), an to detect MBSPX mRNR in a biological sample or a genetic leasion in a MBSPX gene. Disorders associated with insufficient or excessive production of MBSPX protein include cancer, preclampsia, immune system disorders and inflammation, neurological disorders, cardiovascular disorders and and muscle abnormalities. The anti-MBSPX antibodies can be used to detect and isolate MBSPX proteins and modulate MBSPX activity. The present sequence represents the nucleotide sequence of MBSP10.
                                                                                                                         Novel human polynucleotide sequences and the membrane bound or secreted polypeptides encoded by these sequences, designated \mathtt{MBSPX} -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human cell cycle and proliferation protein CCYPR-19 cDNA, SEQ ID NO:73.

CCYPR and agonists of CCYPR are used to treat diseases or conditions cell cycle and proliferation proteins (CCYPR), AAB60453-AAB60566.
CCYPR and agonists of CCYPR are used to treat diseases or conditions associated with decreased expression of functional CCYPR, while CCYPR and agonists are used to treat diseases or conditions associated with coveragnession of functional CCYPR. Monoclonal or polyclonal antibodies or cCCYPR may be used in enzyme-linked immunosorbent assays (ELISA) or radioinmunoasays to detect CCYPR. CCYPR itself may be used to detect compounds e.g., antibodies, oligonuclectides and proteins (receptors) that specifically bind to CCYPR, and in drug screening methods to identify compounds that modulate the activity of CCYPR. CCYPR incledides and an be used to generate transgenic animal models of human disease, and can be used in gene therapy in target cells with genetic abnormalities with respect to the expression of CCYPR.

Sissassa which can be disquosed, treated and prevented using CCYPR incolomental and cell signalling disorders, and cell proliferative disorders include anaemia, epilepsy, arteriosclerosis, asthma, cancer, allegies, cinclude anaemia, epilepsy, arteriosclerosis, asthma, cancer, allegies, controlled subseties mellitus, disorders of the menstrual cycle and infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ischaemia reperfusion injury; haematopolesis; cancer; neuropathy; transgenic animal; Alzheimer's disease; Parkinson's disease; burn; amyotrophic lateral sclerosis; platelet disorder; thrombocytopenia; ulcer; osteoporosis; bone degenerative disorder; periodontal disease; gut protection; lung; liver fibrosis; immune deficiency; infection; severe combined immunodeficiency; sclib; autoimmune disorder; allergy; multiple sclerosis; rheumatoid arthritis; diabetes mellitus; asthma; fertility; analgesic; pain; antigen; ss.
                                                                                                                                                                                                                                                          used to treat, diagnose and prevent immune, developmental and cell signaling disorders and cell proliferative disorders including cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

The invention relates to novel isolated numan secreted polypeptices (i) and (il) and (il) are useful for treating inflammatory conditions such as arthritis, nephritis, Crohn's disease, inflammatory conditions such as arthritis, nephritis, Crohn's disease, inflammatory conditions and injury, shock, sepsis, immune responses, and is involved in increasing heamatopoiesis, stem cell survival, bone growth and remodeling. (i), (ii) ammatopoiesis, stem cell survival, bone growth creating transgenic animals useful for studying modulators of the polypeptides well as for studying modulators of the polypeptides. (C i) induces the proliferation of neural cells and responseation of nerve and brain tissue and is useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's, and brain tissue and is useful for the treatment of central and selected in addition, (I) is involved in chemotactic or chemokinetic sclerosis. In addition, (I) is involved in chemotactic or chemokinetic activity, regulation of haematopolesis and is useful for treating myeloid or lymphold cell disorders platelet disorders such as thrombocytopenia and for regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth, and in tissue repair, healing of burns, incisions, clost treating osteoporoxis, osteoarthritis, bone degeneration or egeneration and treatment of lung or liver fibrosis, corpertialon injury in various tissues, various immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or feugral infections, autoimmune disorders e.g. multiple sclerosis, creations and conditions, such as asthma or other respiratory problems. C returnity, matchin, carbohism, astermed or elliphing in protein, carbohism, astermed or elliphing or elliphing and elliphing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     dietary fat, lipid, protein, carbohydrate, vitamins, minerals, provides analgesic effects or other pain reducing effects, immunoglobulin like activity and can act as an antigen in a vaccine composition to raise an immune response. AAS44920-AAS45295 represent novel human secreted protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           invention relates to novel isolated human secreted polypeptides (I)
                                                                                                                                                                                                                                                                                                            Ma Y, Zhou P;
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel polypeptides and nucleic acids obtained from cDNA libraries prepared from various human tissues, for diagnosis and treatment of cancer, neurological, inflammatory, and autoimmune disorders -
                                                                                                                                                                                                                                                                                                            Asundi V, Xu C, Wehrman T, Ren F, Ma Y, Zhou Drmanac RT, Zhang J, Chen R, Xue AJ, Wang J;

Shimkets RA, Leach M;

WPI; 2000-602362/57. P-PSDB; AAB42217 Novel nucleic acids and peptides derived from open reading frame X, useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease -

Claim 5; Page 3123-3124; 5507pp; English.

antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroldism, cholesterol ester storage, systemic lupus AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antiparkinsonian; noctropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 14, Patent No. 5489

CURREWA PEPLICATION DATA:
APPLICATION NUMBER: US/08/617,860B
FILING DATE: 01-MAR-1996
PRIOR APPLICATION NUMBER: DE PGT/EP94/02950
FILING DATE: 05-SEP-1994
APPLICATION NUMBER: DE P4329951.2
FILING DATE: 04-SEP-1993
INPORMATION FOR SEQ 1D NO: 3
SEQUENCE CHARACTERISTICS:
LENGTH: 3350 Base pairs
TYPE: Nucleic acid
STRANDEDNESS: Double stranded
                                                                                                   3; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 23, Application US/08818655

Patent No. 625857

GENERAL INFORMATION:
APPLICANT: Haber, Edgar
APPLICANT: Haber, Edgar
APPLICANT: Yet, Shaw-Fang
TITLE OF INVENTION: SMOOTH MUSCLE CELL LIM PROTEIN
NUMBER OF SEQUENCES: 46
CORRESPONDENCE ADDRESS:
ADDRESSED: Fish & Richardson, P.C.
STREET: 225 Franklin Street
                                                                                                                               APPLICANT: Lee, Mu-En
APPLICANT: Lee, Mu-En

/note="Vector: lambdaZAP; Site_1: EcoR1; Site_2: Xho1;
/note="Vector: lambdaZAP; Site_1: Seedlings were
conditions in the dark at room temperature on filter paper
with water, nystatin and cefotaxime in covered
crystallization dishes: Five-day old seedlings were
incubated at 90% RH for 24 hr. Shoots were then harvested,
total RNA was prepared, poly(A) RNA was purified, one
primary unamplified cDNA library was made, 600000 pfu were
in vivo excised to give pBluescript SK(-) cDNA phagemids.
These steps were performed in the TJ Close laboratory at
the University of California, Riverside (Choi, Close,
Fenton). Phagemids were plated and picked at the Clemson
University Genomics Institute (CUGI) (Begum, Palmer,
Frisch, Atkins and Wing). Plasmid DNA preparations, DNA
sequence has sequence analysis were performed at CUGI
(Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main).
The sequence has been trimmed to remove vector sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Hordeum vulgare

mansoni agarose embedded DNA was partially digested with Hin dIII. High molecular weight fragments were ligated in pBeloBAC11 digested with Hin dIII. The average insert size is 100 kb. Total clone coverage: approx. 7.95 X the haploid genome. Further information can be found in Le Paslier et al. (2000) Construction and characterization of a Schistosoma mansoni bacterial artificial chromosome library. Genomics 65: 87-94."

/ note="Vector: pBeloBAC11; Site_1: Hin dIII; Constructed
in the laboratory of Dr. Denis Le Paslier at the Fondation
Jean Dausset, CEPH, Paris, France. Briefly, Schistosoma
mansoni agarose embedded DNA was partially digested with
Hin dIII. High molecular weight fragments were ligated in
pBeloBAC11 digested with Hin dIII. The average insert size
is 100 kb. Total clone coverage: approx. 7.95 x the
haploid genome. Further information can be found in Le
Paslier et al. (2000) Construction and characterization of
a Schistosoma mansoni bacterial artificial chromosome
library. Genomics 65: 87-94."
